## About IRENA

The International Renewable Energy Agency (IRENA) is an intergovernmental organisation that supports countries in their transition to a sustainable energy future, and serves as the principal platform for international co-operation, a centre of excellence, and a repository of policy, technology, resource and financial knowledge on renewable energy. IRENA promotes the widespread adoption and sustainable use of all forms of renewable energy, including bioenergy, geothermal, hydropower, ocean, solar and wind energy, in the pursuit of sustainable development, energy access, energy security and low-carbon economic growth and prosperity.

# FOREWORD

This *Renewable capacity statistics 2026* highlights the continued progress made in the global energy transition, illustrating the growth of renewables in newly installed power generation capacity in 2025.

By the end of 2025, renewables accounted for 49% of global installed power capacity, and comprised 85.6% of annual global power additions, largely due to significant growth in solar and wind power.

This impressive, consistent growth reflects the strength of the economic case for the energy transition; the competitiveness and resilience of renewable power have pushed additions to new records almost every year since the turn of the millennium.

Yet, as we draw closer to a world in which renewable energy accounts for half of total capacity, many energy planning questions still need to be addressed to establish renewables as the most significant source of electricity generation, including in the context of grid flexibility and adaptation to variable renewable power.

Continuing the trend reported in recent years, 2025 saw the largest increase in renewable energy capacity to date – with the addition of 692 gigawatts (GW) of renewable capacity – expanding the stock of renewable power by 15.5%. Solar power alone accounted for nearly three-quarters of renewable additions, with a record 510 GW added during the year; while 159 GW of wind energy was added.

However, significant disparities remain in deployment. China, the United States and the European Union together account for 550 GW (or 79.5%) of the new renewable capacity installed in 2025; Africa accounted for 11.3 GW (or 1.6%). Despite their capacity growing by 19.6% during the year, small island developing states, with a combined renewable energy capacity of 11 GW, comprise just 0.2% of the worldwide total.

Africa recorded its highest capacity increase in 2025, rising by 15.9% to reach a total of 82 GW, driven by Ethiopia, South Africa and Egypt. Another region that experienced its largest annual growth is the Middle East, which increased by 28.9%, led by Saudi Arabia.

Looking ahead, we need to see a much faster pace of growth in the stock of renewable power plants and distributed electricity generation around the world. This report is a valuable resource for tracking progress in this regard, and a reminder of the work that lies ahead to achieve a just, inclusive and sustainable future for all.

**Francesco La Camera**

## NOTES TO THE TABLES

The renewable power capacity data shown in these tables represents the maximum net generating capacity of power plants and other installations that use renewable energy sources to produce electricity. For most countries and technologies, the data reflects the capacity installed and connected at the end of the calendar year. The data is presented in megawatts (MW) rounded to the nearest one megawatt, with figures between zero and 0.5MW shown as a 0.

Data has been obtained from a variety of sources, including the IRENA questionnaire, official statistics, industry association reports, and other reports and news articles. Numbers followed by the letter "o" are figures that have been obtained from official sources such as national statistical offices, government departments, regulators and power companies. The letter "u" follows figures that have been obtained from unofficial sources, such as industry associations and news articles. The letter "e" follows figures that have been estimated by IRENA from a variety of different data sources.

Data are available for download at [www.irena.org/statistics](http://www.irena.org/statistics). Technologies are classified according to the [IRENA Energy taxonomy](#).

## NOTES À PROPOS DES TABLEAUX

Les données sur les capacités électriques renouvelables présentées dans ces tableaux représentent la capacité maximale nette de génération des centrales électriques et autres installations utilisant des sources d'énergie renouvelables pour produire de l'électricité. Pour la plupart des pays et technologies, les données reflètent la capacité installée et connectée à la fin de l'année civile. Les données sont exprimées en mégawatts (MW) arrondies à l'unité la plus proche ; les valeurs inférieures à 0,5 MW apparaissent comme 0.

Les données proviennent de sources multiples, y compris le questionnaire IRENA, les statistiques officielles, des rapports d'associations de l'industrie, et d'autres rapports et articles de presse. Les valeurs suivies de la lettre "o" ont été obtenues à partir de sources officielles (par exemple instituts statistiques nationaux, agences gouvernementales, régulateurs, compagnies d'électricité). La lettre "u" correspond à des valeurs venant de sources non officielles comme des rapports d'associations de l'industrie ou des articles de journaux. La lettre "e" correspond à des valeurs qui ont été estimées par l'IRENA à partir de sources diverses.

Les données sont téléchargeables sur le site [www.irena.org/statistics](http://www.irena.org/statistics). Les technologies sont classées selon la [taxonomie de l'énergie de l'IRENA](#).

## NOTAS A LAS TABLAS

Los datos de capacidad de generación eléctrica con energías renovables que se muestran en estas tablas representan la capacidad máxima de generación neta de las centrales eléctricas y otras instalaciones que utilizan fuentes de energías renovables para producir electricidad. Para la mayoría de los países y las tecnologías, los datos reflejan la capacidad instalada y conectada al final del año natural. Los datos se presentan en megavatios (MW) redondeados al megavatio entero más cercano, con cifras entre cero y 0,5 MW representadas como un 0.

Los datos se han obtenido a partir de una variedad de fuentes, incluyendo el cuestionario de IRENA, estadísticas oficiales, informes de las asociaciones industriales, y otros informes y artículos de noticias. Los números acompañados de la letra "o" son cifras que se han obtenido a partir de fuentes oficiales, como oficinas nacionales de estadística, departamentos gubernamentales, reguladores y compañías eléctricas. La letra "u" acompaña a cifras que se han obtenido a partir de fuentes no oficiales, tales como asociaciones industriales y artículos de noticias. La letra "e" acompaña a números que han sido estimados por IRENA a partir de diversas fuentes de datos.

Los datos están disponibles para su descarga en [www.irena.org/statistics](http://www.irena.org/statistics). Las tecnologías son clasificadas de acuerdo a la [taxonomía energética de IRENA](#).
